

LIQUID ORGANIC MATTER

MOL ORG is amendment organic residues from plants, which added to soil, stimulates the roots growth and microorganisms, and unlocks the nutrients that are not assimilated by the plant (nitrogen, phosphorus, potassium, iron, manganese, copper, zinc ...). **MOL ORG** is a completely soluble, micro-filtered, easy to apply in the localized irrigation systems (drip, exudation, and aspersion) and gravity systems.

The foliar application of **MOL ORG** improves absorption and transport of nutrients in the plant, and other compounds: hormones, vitamins, etc ..

Proper use of **MOL ORG** will allow a saving in the dose of fertilizer, thus improving their uptake by the plant, and facilitates their transport to the places where nutrients are necessary for the perfect plant development.
