SunScreen WP

SOLAR PROTECTOR

CHARACTERISTICS

SunScreen is a solar protector for fruit and vegetables based on Zinc Oxide in an excipient of Calcium Carbonate, which reduces damage by heat and sunburn stress.

SunScreen reduces the temperature of the leaf, allowing the stomatal opening extends for a longer time, increasing photosynthesis. The reflective action of its particles illuminates in better way inside the tree or any other plant, improving fruit color in the darkest places.

SunScreen is designed to be applied by any phytosanitary treatment standard equipment and also by aerial. Contains Zinc which is absorbed by the plant, thus improving its resistance to stress conditions, including nutritional.

COMPOSITION

%w/w

Zinc Oxide	3%
Calcium Carbonate	97%

DOSES AND APPLICATIONS

CROP	DOSES	REMARKS
FRUIT TREES: Apple trees, Pear trees, Lemon, Orange, Tangerine, Clementine, Grapefruit, Olives, Peaches, Nectarines, Pomegranates, Persimmons, Avocado	5-10 Kg/100 L water	Apply in aqueous solutions in a traditional way, with nebulizer. It is recommended to apply on two consecutive passes and in opposite directions. It is necessary that the tree is completely covered (homogeneous distribution) and white color. Make 3-5 applications every 7 days maximum. These applications should be initiated before the period of maximum susceptibility. Use wetting from 1500 to 3000 L / ha
VEGETABLES: Tomatoes, Peppers, Melon, Watermelon	4-7 Kg/100 L water	Is recommended to apply on a volume of 600L/ha two consecutive passes in opposite directions. Apply during periods of higher susceptibility corresponding to the start of veraison when the fruit begins to change from green to orange.

QUALITY AND HEALTH IN PRE-HARVEST

**REFLECTS UV RAYS -
PROTECT FROM HIGH
TEMPERATURES**
